ABOUT ME

Become a Junior Backend Developer, starting with an internship. I am ready to actively learn, participate in real tasks, write high-quality code, and grow within the team. I am interested in backend logic, APIs, databases, and integration with all services. Even a free internship with mentoring feedback is a valuable experience for me.

In addition to backend development, I study UX/UI and game development in Unity, which helps me understand the full cycle of creating digital products — from user experience and interface design to technical implementation. This mixed background gives me a broader view of how systems work and how to build convenient and effective solutions.

I adapt quickly, take responsibility for my work, and enjoy learning new technologies. I prefer independent work but can easily collaborate in a team when needed. My goal is to join a company where I can apply my skills, gain industry experience, and grow as a strong IT specialist.
